## About us

For over 60 years, Industria vzw has been the official student organisation of the Industrial Engineers students at Campus Groep T KU Leuven. With a team, on average, consisting of 40 students, we organise all kinds of activities for the students of Group T and Leuven in general. Going from co-organising the biggest students' sports event in Belgium, the 24-hour run, to being the co-founder of the biggest students' festival, Project L.

Those events are, however, only a very small portion of what we do and stand for. Our main goal is to support students in every possible way to make them better engineers. Making sure the first years find their way on our campus, get their books in time and build the bridge between students and our professors/faculty/university is, therefore, one of our most important jobs.

Next to that, we believe that helping students to interact with enterprises is really valuable. That is why Industria has a team dedicated to helping students grow in their professional careers and helping them in their search for a job, thesis or internship. To do this, the Business Relations Team organises all kinds of networking events. Going from specific Sector Nights towards the more general Engineering Job Fair and Walking Dinner.

Throughout the years, we have also realised the added value of bringing the students to companies and bringing the knowledge from those companies to the students to help them grow in their professional careers. By hosting a TEDx talk and workshops, we look forward to further enhancing the interaction between both parties and building long-term relationships.

## Our Offer

Within Industria Business Relations, we look for Group T students who look for a challenge next to their engineering career and want to learn new skills. Through hands-on experience and being responsible for one of the networking events for over 100 students, you will be able to grow your organisational, technical, soft, work in a team, and so many other different skills. This is while being surrounded by a professional working environment in a team where you will meet new friends for life. Next to that, you will be able to interact with our main partners and learn how they work and how to interact with them.

In addition to the formal workings of any VZW, where you will learn what it takes to run a small team, you will also be challenged to solve problems and think creatively. A good example of this was the co-founding of the Engineering Case Competition during the academic year of 2023-2024. Let's think big and support the engineering students of Leuven TOGETHER!
